**An affordable way to trap
wild pigs on your property**

Wild Boar are Expensive

Significant Crop Losses – Farmers in pig-infested areas can experience 20–30% crop yield reductions, resulting in major financial losses.

Environmental Destruction – Wild pigs root up soil, destroy native plants, pollute water sources, and disrupt ecosystems, leading to long-term environmental degradation.

Livestock & Property Damage – Pigs can transmit diseases to livestock, destroy fencing, and tear up pastures, further increasing costs for landowners.

- Premium Materials
- Precision Construction
- Innovative Net Design
- Made in the USA
